

## F 1043 – Azraq oasis area

Well F 1043 “AZ 12 (PP 195)” is located in the Azraq oasis area, near several wells with high abstraction rates. The current trend is -0.42 m/yr, which is less than long-term trend of the linear fit to all data. The rate of decline slowed in 2006. At this rate, the combined saturated thickness of the Basalt and B4 aquifers is forecast to decline to 85 percent at this location in 2030.
